165 Whitney Avenue
New Haven, CT 06511

Education

Princeton University *2018-2024*
Ph.D. in Economics
Thesis: "Essays on Human Capital: Re-skilling, College Major Choice, and the Incidence of Local Labor Market Shocks"
Committee: Adam Kapor (chair), Leah Boustan, Bo Honoré

University of Chicago *2011-2015*
B.A. in Economics with Honors, Mathematics B.A.

Current Position

Postdoctoral Associate, *The Broad Center - Yale School of Management* *2025–Present*

Previous Positions

Research Economist, *U.S. Bureau of Labor Statistics* *2024–2025*

Research Interests

PRIMARY Labor Economics, Economics of Education
SECONDARY Empirical Market Design

Job Market Paper

"College Discretion in Admissions and Student Achievement." with Eduard Boehm and Álvaro Carril

This paper studies how much discretion colleges should have in admissions. We exploit two features of Chile's centralized college admissions system: program admission rules are publicly observed, and

the assignment mechanism is known. We leverage a reform that expanded discretion by giving programs the option to increase emphasis on within-high school rank in admissions. Programs used this discretion very differently: although most could have increased socioeconomic diversity, many chose not to. We estimate a model of students' preferences and outcomes that decomposes graduation into student ability, average program effects, and student-program match. Match, the part of a program's effect that varies across students, explains 21 percent of the variance in predicted graduation, and both students' applications and programs' admission rules select on it. Recovering program preferences over student composition from their observed rule choices, we find that programs value expected graduation and that this preference operates primarily through match. Consistent with their differential responses to the reform, programs differ in how they trade off expected graduation against socioeconomic diversity. In counterfactuals, Chile's limited discretion performs well against alternatives: test-only admissions and lotteries reduce access or graduation, while full discretion increases segregation.
